w06-p1: Add blog content with css

The screenshot shows a code editor (VS Code) and a browser window side-by-side. The code editor displays a portion of the file `blog_42.css` with the following content:

```
72 .blog-content {
73     padding-bottom: 1rem;
74 }
75
76 .blog-content span {
77     text-transform: uppercase;
78     letter-spacing: 2px;
79     color: var(--primary);
80     margin: 0.5rem;
81 }
82
83 .blog-content h3 {
84     text-transform: capitalize;
85     color: var(--primary-dark);
86     margin: 0.5rem 0;
87 }
88
89 .blog-content p {
90     color: var(--gery);
91     margin-bottom: 0.5rem;
92 }
93
94 .blog-content a {
95     text-transform: capitalize;
96     color: var(--primary-dark);
```

The browser window shows a "Latest Blog" section with three cards. The first card has a red box around its `<div class="blog-content">` element in the DOM tree. The second card has a red box around its `div.blog-content` element in the DOM tree. The third card has a red box around its `div` element in the DOM tree.

Browser developer tools are open, showing the CSS styles applied to the blog content elements. The browser window is set to an iPhone XR view with dimensions 414x896.
